

J-Pac Installation

1. Open http://jordanpropeller.com/updates/jpac5_download.html in a browser such as Safari, Firefox, or Chrome.
2. Click on the link for “Jpac_505.zip” under the Macintosh heading.
3. When the dialog box appears, select “Save.”
4. When the download is complete, find the “Jpac_505_Mac.zip” file. Double-click on it to extract the files.
5. Select the unarchived folder (named JPac 5) and drag it to your hard drive. Drop it at the root level.
6. Go to your Windows computer and find the most recent JPac folder. This should be on your C:/ drive at root level. (Please note, the file name may vary slightly. If you cannot find a JPac folder in this location, please contact JPac for support.)
7. Open the JPac folder and find the file with the suffix .4DD.
8. Copy the .4DD file to a flash drive, or email it to yourself.
9. Go back to your Mac and paste the copy of the .4DD file into the JPac 5 folder on the Mac.
10. Double-click on the JPac 5 application icon.
11. If you get a security message asking if you want to run the software, uncheck the box before “Always ask before opening this file” and select the “Run” option.
12. If the version of JPac on your Windows computer was JPac 5, it will simply open. If it was JPac 4, there will be a one-time conversion process. If you get a message like the one below, please select ‘Open.’

- a. A dialog box will open, asking you to select a 4D data file. To do so, navigate to the location you placed the .4DD file in step 9. Select that file, and chose “Open.”
 - b. A “database conversion” dialog should open at this point. Select the “Convert database” button.
 - c. A list of login options will appear. Select the appropriate option from the list of login options and click “Connect.”
 - d. The conversion process will complete at this point. It may take a few minutes, and may present you with a “Details” screen, showing an activity report, at the end. This should happen only once. Click OK here to proceed.
 - e. You may get a message that a download pack was installed. If so, click OK to proceed to the JPac database.
13. Once you have verified that JPac 5 works, you may delete the downloaded JPac_505_Mac.zip file.
